

Operator Queue Snapshot

PERISHABLE queue snapshot — refreshed by any session that changes the queue. The Decision Deck is the live truth.

PERISHABLE — snapshot 2026-07-31 (late-night refresh: b72 + crosshair landed and swept; six-repo roadmap audit — full per-repo menu at notes/ROADMAP_STATE_AUDIT_2026-07-31.md). This page is the paper mirror of the Decision Deck and the open designer-owned items in the records. It goes stale by design; **any session that changes the queue refreshes this file + date and rebuilds the PDF** (python3 build_pdfs.py). The deck itself is always the live truth.

Items are grouped by **where you can actually do them**. Today's world-shape session record: notes/sessions/2026-07-30-worldshape-forklift.md; its deck payload: tools/decision_deck_items_2026-07-30-worldshape.json.

T. Tonight (PC, post-shift — no feel verdicts, everything else legal)

- **b72 game-side intake — DONE tonight** (sl-0043, game dde3101; b71 retired in place, porosity 64). **Crosshair fix DONE too** (sl-0044, game 0a7d69d) — the game is running windowed for your size/contrast taste call (taste is legal tonight).
- **b72 country-road look** — verdict pending WF-side; big-screen taste ruling.
- **Deal the world-shape deck payload** — PASTE FROM AI → `decision_deck_items_2026-07-30-worldshape.json` (5 cards, all confirmations of your own Tier 1 calls today).
- **Paste the W-13 walkability ask** into the next WF session (text in the session record §3; that session logs the ask_opened entry).
- If energy: **sl-0041 rehearsal** — direct world_filler over the dusk overworld (docs/20 step 1). Bring the villager test: "what is this doing here?"

A. From anywhere (phone / dead time — no game needed)

- **Word the loop bar card** — now with its true aim: "is the first mile of MY world worth walking daily." Deck card staged, your words.
- **Drop the itch + Discord links into the record.**
- **Hours backfill numbers** (+ today's forklift hour — designer call, agent recommends logging 1.0 h).
- **Onboarding copy, your voice** (constraints: no coaching, never ask for play duration).
- (Maybe phone:) eight-holds review, b71-grading (+6 moss re-rolls vs round-18 state; WF-side); tileforge REF3 v3 promotion call.

B. At the machine — any energy (tired counts; these are not feel)

- **Designer-eyes render checks:** creation screen, drops + HUD, comments box, feedback toast + bundle row, onboarding layout — one launch covers all.
- **Eyes-closed audio pass** (Law 7) against the real RF cues; verdict slot in `game notes/AUDIO_CUE_MAP.md`.
- **b71/b72 overworld look-around** (styled paths, harbor capital, cliff line).
- **Weekly GIF** — loop/king material fresh; G → `tools/gif.ps1`.

C. Rested day-start only (feel — protect these)

- **THE rested feel pass** — closes M2, ratifies the provisional bundle (six ordinaries, slash, arenas, sphere set, audio-in-play).
- **b65 city walk verdict** — cities-arc acceptance, still unrecorded.
- **THE LOOP, first real run** — play THE RUN, call the skeleton **judgeable** (starts the bar clock), judge every [T] rate.
- **Gate-1 deck cards** staged for rested ratification (CORE-53/55 rewrite).
- **RF Hell Engine V2 exact-file listening verdict** — Phase 8's one open box; decide before Celestial War starts.

D. Waiting on others / later (nothing for you to do yet)

- Polished boss sheets from the assembler (3 animation corpora + Eclipse Unicorn await one-at-a-time approvals; the NEXT delivery must ride the new gate).
- ~~Assembler publish gate~~ **DONE same night (sl-0046)**: the sl-0014 work was recovered from the pre-protocol Codex worktree, checkpointed (salvage/19-boss-continuation @ 0b35dce), and the gate is live on main (bf6269c, harness green). Left for later: the boss-lane fork triage (salvage bosses 10–19 vs main's Unicorn lane — both safe on GitHub) and boss 20.
- **Music seam merge → main** — now 15 commits (whole Phase-8 line, audit-verified pure superset); gates: npm test in apps/desktop + cargo test -p audio-core --lib. The Hell Engine listening verdict itself is rested-only (section C).
- world_filler consumption — **note: today's world-shape session flags its timeline as likely moving UP** (zone authoring engine); sequencing ruling will come via the deck when concrete.
- The tops+ramps overworld arc (design conversation when you want it).
- W-9 scavenging-vendor idea (parked until you reconstruct it).
